## Trailer Socket Tester 13pin

### INSTRUCTIONS:

1. Connect the 13pin plug to the vehicle socket to be tested.
2. Take the tester and sit in the Driver's seat of the vehicle.
3. The 12v light indicates the tester is correctly connected.
4. Press the TEST button and all of the LEDs will light to confirm all are working.
5. Switch on the Ignition and test the lights in the normal way.
6. The individual LEDs will light when the appropriate vehicle controls are operated.
7. This confirms the correct operation of the towing electrics fitted to the vehicle.

NB: On some vehicles with a CAN BUS system the LEDs may flicker – This does not indicate a fault therefore continue testing.
